

Security & Data Ownership Overview

Prepared for IT and evaluation committees. Every claim below is stated exactly as it appears on jwero.ai/trust/security — nothing added, nothing softened.

In plain words

- **Where your data lives:** one isolated database per business. Your data lives alone, encrypted, never mixed with anyone else's.
- **Who can see what:** role-based access, per role and per branch. Owner, manager and counter staff see different worlds.
- **Export anytime:** your data leaves with you in standard formats whenever you ask. No hostage clauses.
- **What AI can and can't do:** every AI action waits in an approval queue inside caps and quiet hours you set — never a surprise message.
- **Approvals on money:** maker-checker approvals and tamper-evident document trails on financial records.
- **Kill switches:** pause any AI activity instantly, at five scopes — one action, one agent, one branch, one channel, or everything.

Technical layer

Control	Implementation
Tenant isolation	One database per business — physical isolation, not row-level flags.
Encryption	Encrypted credentials; data encrypted in transit and at rest.
Authentication	Multi-factor authentication and passkeys; sessions revocable globally in one action.
Access control	Role-based access control, ~150 fine-grained permission slugs, fail-closed checker.
AI authorisation	A second permission axis for AI: per-user/org action allowlists, independent of human RBAC.
Financial integrity	Maker-checker approvals and tamper-evident document transitions on financial records.

The honest list: what we are still building

Enterprise buyers punish discovered gaps far harder than admitted ones. Here is the list, in writing:

- Enterprise SSO/SCIM for chain deployments — in active development, not shipped.
- Formal certifications (SOC 2 / ISO) — planned; published only when earned.
- A single unified, immutable audit trail across every module — activity logging exists per module today; consolidation is in progress.
- Offline mode — Jwero is a connected, cloud-hosted product today.

Compliance

Jwero maintains a data-processing summary and privacy statement aligned to applicable data-protection law. See the Privacy Policy and DPDP statement at jwero.ai/legal/privacy and jwero.ai/legal/dpdp. For a regulated procurement process, request the full sub-processor list and current legal review status directly — this document intentionally does not restate anything not already public.
