

The Buying-Committee Kit

One artifact per stakeholder, for multi-store, franchise, wholesale and manufacturing evaluations. Everything here mirrors jwero.ai/enterprise — pass the relevant page to the relevant person, or share the whole document.

For the MD / Owner

- The case for one system over five: most jewellery businesses run a messaging tool, a catalogue app, a website, scheme spreadsheets and an agency retainer — five bills, and the customer exists as a whole person in none of them.
- ROI is measured, not promised: a weekly, plain-language growth report shows returning customers, appointments booked and revenue attributed to the system — judged on your own evidence from week one.
- Pricing is a ladder (Assist → Approve → Autopilot), not a single all-or-nothing commitment. Start where you are comfortable.

For IT / Operations

- Isolated database per business (physical tenant isolation, not row-level flags), encryption in transit and at rest, MFA and passkeys, ~150 fine-grained role-based permissions.
- AI governance: every AI action waits in an approval queue inside daily caps and quiet hours; a kill switch stops any AI activity instantly at five scopes.
- Honest gaps, stated plainly: enterprise SSO/SCIM is in active development, not shipped; formal certifications (SOC 2/ISO) are planned and will be published when earned.
- Migration: one pilot branch first, with exit criteria you define, then a staged rollout — no big-bang migration.

For Finance

- Your ledger stays exactly where it is. Jwero bridges to Tally and Zoho Books — sales data flows to your existing ledger automatically; nothing about your accountant's month-end changes.
- GST invoicing at the live metal rate is live today. A full POS counter with cash day-close is on the public roadmap, not shipped — stated here so it is never a surprise.
- Transparent implementation scope: what's included and what's extra are written down before you commit. No hidden costs.

For Branch Managers

- Day-to-day counter operation stays with the branch. Central control applies to pricing consistency and brand standards, not daily running.
- Training is role-based and staged with the rollout — every branch gets the same onboarding as the pilot branch, not a rushed rollout after week one.
- If your team can use WhatsApp, they can use Jwero — the daily screens are deliberately simple, and the AI workforce absorbs first-response and routine follow-up.

Rollout at a glance

Stage	What happens
Land (week 1)	Customers imported for you. Existing WhatsApp number connected. Catalogue published. Current software untouched.
Prove (days 30–90)	Weekly growth report shows returning customers, appointments and attributed revenue. Judge on evidence.
Expand (when ready)	Schemes go digital, journeys switch on, more branches join — each step earned by the last one.

This document reflects the site published at jwero.ai/enterprise as of the date below. Facts here are the same ones claimed on the live page — nothing here is stated more strongly than it is online. Questions: WhatsApp Jwero directly from any page on the site.
